DETAILED ACTION

Allowable Subject Matter

Claims 4, 8-11 and 13-31 are allowed.

The following is an examiner's statement of reasons for allowance: claims 4, 8, 16, 20 and 28 are allowed for reasons as stated in the previous Office action, dated November 8th, 2005.

Claims 9-11, 13-19, 21-27 and 29-31 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sofield (US 5,621,214) is similar to the claimed invention, including moving a detector within the radiation field and correlating maximum intensities by location with respect to expected maxima; however, the determinations of maximum intensities are within the context of normalizing the source output for calibration purposes and are not used for the basis of altering an excitation plan, and further where the detector is moved within a single radiation field and the calibration is determined within the field and is not compared to other gantry angles, etc.

Art Unit: 2882

Seppi (US 2004/0096033 A1) teaches a similar device to the claimed invention, where a detector measures the radiation field provided by a first excitation plan, and where the output of the detector is used to verify/modify the excitation plan based upon detected deviations from the plan; however, the detector is a stationary area detector, and there is no discussion of detecting or comparing maximal intensities as forming the basis for excitation plan revision.
